

Savings for Healthcare

Rescue Your Bottom Line with Energy Efficiency

Healthcare organizations spend over more than \$6.5 billion on energy usage each year, according to Energy Star. On average, 41% of this is devoted to cooling and ventilation. Upgrading to more energy-efficient technologies can help hospitals increase comfort for staff and patients, reduce vulnerability to staff and patients, reduce maintenance cost with longer-lived technologies and, ultimately, protect hospitals' bottom lines. The Ameren Missouri BizSavers® Program is here with incentives available to help reduce the cost of these upgrades and get your organization running more efficiently.

How Hospitals Use Energy

Top Ways to Save

LED Lighting

Efficient Chillers and Rooftop Units

HVAC Controls
